

HIGHJUMP™ ESSENTIALS FOR SUPPLY CHAIN ADVANTAGE

BENEFITS

- Fully integrated with other HighJump™ Supply Chain Advantage (SCA) applications or it can be deployed stand-alone
- Our adaptable platform allows extensive latitude to tailor solutions to your business' needs

HighJump Essentials is a portfolio of supply chain execution solutions. Our Essentials product line is fully integrated with other HighJump™ Supply Chain Advantage (SCA) applications and can also be deployed stand-alone.

HighJump has long recognized that no two businesses are alike. As a result, "inflexible" packaged software often provides a less-than-perfect solution. Our adaptable HighJump One platform affords our customers extensive latitude in tailoring their solutions to meet their specific business needs. With Essentials, we wanted to take that theme a level deeper. That led us to create a series of applications that give our customers a set of building blocks that can be used to assemble solutions tailored to meet their specific needs – and that offer the flexibility to be used in conjunction with our SCA applications or on their own.

HIGHJUMP IMAGE

HighJump Image automatically stores scanned or printed documents and electronic forms, archiving the data electronically for easy indexing and retrieval to track compliance standards.

The Image module allows you to break from the chains of your filing cabinet and capitalize on the power of your system, instantly retrieving the document or image that you're looking for. These documents can then be stored, searched and viewed through OCR technology. An intuitive user experience with a powerful meta-data engine makes extensive retrieval options possible.

HIGHJUMP INSPECTION

HighJump Inspection is a quality assurance solution that allows companies to automate their inspection processes for a diverse set of tasks, including the inbound receipt of goods, outbound sales orders, material handling equipment, tractors/trailers, physical plant equipment, and specialized inventory. It allows the user to quickly and easily capture images at any point of the inspection process.

This HTML5-based solution can be accessed on any device with an internet connection and allows you to reduce the cost of dealing with compliance and regulatory requirements (i.e., C-TPAT inspections for international transactions, outbound trailer condition to customers, etc.). You will drive continued improvement of quality systems and performance to benefit both the buyer and producer. It will also allow you to improve the performance of suppliers and product quality to minimize product loss, rejects, chargebacks and recalls.

HIGHJUMP PULSE

HighJump Pulse allows you to create, manage and view KPI dashboards and analyze ad-hoc business intelligence using pivots, drill down, charts, and graphs.

With this module, you can measure your operation's performance and the success of your business with simple, digestible KPIs that measure people, processes, and inventory. It provides full visibility into your entire enterprise. You will be able to view historical trends and real-time metrics that inform your decision-making. It can even intersect your Supply Chain data with other external data sources (i.e., ERP, OMS, etc.).

HIGHJUMP REPORT

HighJump Report provides on-demand, pixel-perfect reporting for HighJump products such as Warehouse Advantage, Retail Advantage, and Yard Advantage. Report runs as a separate application that allows the administrator to manage and configure reports and allows both users and administrators to run ad-hoc reports. It can print hard copy documents generated by the SCA suite, including OTR documents, gate passes, and much more.

HighJump Report extends SSRS with features like report versioning and user-based data filtering. It does this while providing an embedded experience with simplified management.

HIGHJUMP SCHEDULE

HighJump Schedule is a resource scheduling solution that provides a set of tools to help you cost-effectively move from a manual appointment system to full automation of the process. Its web-centric design allows users to quickly and easily book an appointment based on customizable business rules for any type of resource (e.g. dock doors, manufacturing machinery, material handling equipment, etc.). External carriers and vendors can log into the portal to schedule a date, time, and dock door for deliveries or outbound orders based on parameters set by warehouse operations.

Improve efficiency, improve throughput, increase asset utilization, access historical data, and improve visibility into the schedule and availability of resources – all with HighJump Schedule.
