

Cloud solutions

Reduce complexity, increase uptime and boost productivity

Körber's cloud-based warehouse management system (WMS) solutions enable you to digitize your entire warehouse management system, and run it in the cloud. This will free your organization from the complex issues associated with managing an on-premises IT infrastructure.

On-premises infrastructures present major challenges

Running warehouse applications internally brings a broad range of challenges. For starters, you need to carefully consider how to allocate resources in terms of system implementation, training and so forth, to make new software solutions run effectively across your entire warehouse.

You must make sure your system is secure, to protect your business from the possibility of a breach which could lead to downtime. This would have an impact on your productivity, and possibly even your reputation if your customers were adversely affected.

Regulatory compliance is also a key challenge for today's warehouses. Your IT team needs to ensure your software is deployed correctly and functions in line with your specific business requirements, while ensuring compliance.

“Installing and running your software on-premises can be risky, especially if you don't have the resources to carry out a successful implementation. That's why so many warehousing organizations leverage our expertise.”

Scott Brask
Körber

Key benefits

Business continuity

Our cloud WMS solutions will provide your organization with an increased level of business continuity, reducing downtime to maximize productivity across your warehouse.

Monitoring and alerting

As well as helping to safeguard your system, monitoring and alerting capabilities provide valuable reports and data relating to your warehouse solutions.

Zero procurement

By hosting your software in the cloud, you eliminate the need to buy and manage infrastructure within your warehouse.

Expertise

From a cloud infrastructure perspective, Körber brings experts with a wealth of industry experience to the table, to ensure our solutions map to your business needs.

Compliance

Eliminate the time-consuming compliance issues associated with an on-premises system, and focus on running your business.

The days of managing vast amounts of infrastructure on-premises are over. When you're running a modern warehouse, infrastructure isn't something you should be owning. It's something you should be leveraging from organizations like Microsoft Azure, Amazon Web Services and Oracle.

Compliant cloud solutions with built-in protection

Körber's cloud WMS solutions deliver built-in business protection with comprehensive backup capabilities. So, you can rest assured that in the event of a system failure or a catastrophic event, the cloud WMS provides backups of your data and systems. Your warehouse is business critical and Körber's solutions are built to safeguard your entire organization and minimize any loss of profit in the event of an incident.

Monitoring and alerting capabilities are built into our cloud solutions to help you quickly and easily identify potential pain points within the system.

They're also designed to keep you compliant in today's world of increasing regulations and safety requirements. In addition, when you're migrating your system to cloud WMS, you can draw on Körber's deep expertise to ensure a successful implementation. So, by moving your software from an on-premises infrastructure to the cloud, you'll also be mitigating risk.

Our cloud solutions in use

Conn's HomePlus

Conn's has 4,500 employees, 117 retail stores and a growing ecommerce business. The company replaced its homegrown warehouse management system with a cloud-based solution from Körber to ensure visibility and consistency across 167 sites.

The Körber difference

Over the years, Körber has built up a huge amount of operational excellence in cloud-based warehousing systems while implementing advanced solutions for clients all over the world.

“With our cloud solutions, people in your business aren't spending time worrying about your IT infrastructure, security and compliance. That time is much better spent optimizing operations and generating more productivity within the warehouse.”

Scott Brask
Körber

Cloud-first

Körber embraced the cloud for warehouse management solutions before any of our competitors. Analysts predicted that by 2020, 50% of all warehouse management systems sold would be in the cloud. We were well ahead of this curve in 2018 with 60% of our new systems provisioned in the cloud.

Successful growth

Our cloud solutions allow organizations to spend more time focusing on their operations. As a result, many of our cloud customers have grown from 20–30 warehouse operatives to 400–500 users.
